## Assessment 1 (Licensure assessment or other content-based assessment aligned to NCTM NCATE Mathematics Content for Secondary, required): Content Specialty Test (CST)

## 1. Narrative

All candidates who wish to earn an initial teaching certificate in Adolescent Education: Mathematics or in Middle Childhood Education: Mathematics must take the Content Specialty Test (CST) for secondary mathematics. Candidates in both programs take the same CST. It is important for the reader to know that we encourage candidates to take the CST as soon as they complete their mathematics content courses, but we cannot require successful completion of the CST as part of our program.

## 1a. CST Overview.

The CST is an examination designed by the New York State Department of Education (NYSED) to assess candidates' knowledge of secondary mathematics. The CST addresses five domains (i.e., mathematical reasoning \& communication, algebra, trigonometry \& calculus, measurement \& geometry, and data analysis, probability, statistics \& discrete math). The CST consists of two sections, a multiple-choice test which addresses each of the five domains and a constructed-response test that addresses the algebra domain (http://www.nystce.nesinc.com/PDFs/NY_fld004_prepguide.pdf) . Effective September 2014, NYSED will replace the current CST with a revised CST (http://www.nystce.nesinc.com/NY_annProgramUpdate.asp\#TestMaterials). The revised CST will address seven domains (i.e., number and quantity, algebra, functions, calculus, geometry and measurement, statistics and probability, and pedagogical content knowledge). The first five domains will be assessed using selected response questions. The last domain will be assessed by a constructed response item. Although the revised CST does not impact the data being reported in this SPA, it is included in Table 1 as a point of information and reference for future SPA reports. In the revised CST, competency A.1.2 in the Number and Quantity domain, and competencies A.6.2, A.6.3, and A.6.4 in the Discrete Mathematics domain will not be addressed.

## 1b. Alignment between the NCTM CAEP 2012 Content Standards and the CST ${ }^{1}$

Table 1. Alignment between the NCTM CAEP 2012 Content Standards and the Current CST and the Revised CST (Sources: For current CST and revised CST
http://www.nctm.org/standards/content.aspx?id=2978.)

[^0]| Mathematical <br> Domain | Competencies Addressed <br> in the Current CST | $\%$ <br> Align- <br> ment | Competencies Addressed <br> in the Revised CST | $\%$ <br> Align- <br> ment |
| :--- | :--- | :---: | :---: | :---: |
|  <br> Quantity | A.1.1, A.1.2, A.1.3, A.1.4 | $80 \%$ | A.1.1, A.1.3.A.1.4 | $60 \%$ |
| A.2 Algebra | A.2.1, A.2.2, A.2.3, <br> A.2.4, A.2.6 | $\sim 71 \%$ | A.2.1, A.2.2, A.2.3, <br> A.2.4, A.2.6 | $\sim 71 \%$ |
|  <br> Trigonometry | A.3.1, A.3.2, A.3.3, <br> A.3.4, A.3.5, A.3.6, <br> A.3.8, A.3.9 | $80 \%$ | A.3.1, A.3.2, A.3.3, <br> A.3.4, A.3.5, A.3.6, <br> A.3.8, A.3.9 | $80 \%$ |
|  <br> Probability | A.4.3, A.4.4, A.4.5 | $50 \%$ | A.4.3, A.4.4, A.4.5 | $50 \%$ |
| A.5 Calculus | A.5.1, A.5.3, A.5.5 | $50 \%$ | A.5.1, A.5.3, A.5.5 | $50 \%$ |
| A.6 Discrete Math | A.6.2, A.6.3, A.6.4 | $60 \%$ | None | $0 \%$ |

## 1c. Brief Analysis of data findings.

Included in this report are data for 27 undergraduate program completers for three years. Only one of the 27 candidates completed our Middle Childhood Education program. Our overall passing rate for the Adolescent Education program completers over the three years is approximately $92.6 \%$ (see Table 2). All but two candidates earned a score of at least 220, the minimum score identified by NYSED as passing. Although NYSED does not specify a minimum passing score for the subareas of the CST, we used 220 as our reference for closer examination of the data. Our candidates collectively need additional support in subarea 6. Sixteen out of 27 candidates (as indicated by the shaded cells in Table 2) scored below 220. Several candidates struggle in subareas 4 and 5 (as indicated by the shaded cells), although the averages for each of the three academic years are over 220 (see Table 3). With only one Middle Childhood Education program completer, no course- or program-level analysis is possible.

## 1d. Interpretation of data.

Given that we are not given copies of the candidates' work for the constructed response problem, we can only hypothesize what factors contributed to the low scores. According to the test framework, the constructed-response problem is an algebra problem for which candidates’ responses are evaluated upon three criteria: purpose, application of content, and support (NYSTCE, Test preparation guide: Mathematics CST [04], 2006, p. 42). The data show that our candidates do very well in the algebra domain in the multiple-choice section. The average score for all program completers in the algebra subarea was approximately 272.33 out of 300 , the highest average score on the CST. We, therefore, hypothesize that our candidates need more support fulfilling the demands of communicating the mathematical reasoning that lead to their respective solutions/answer, and demonstrating their understandings of the mathematics relevant to the problem.

Several candidates struggled in subareas 4 and 5. However, over the 3 years fewer candidates seem to be struggling ( 4 out of 8 in 2011-2012; 3 out of 10 in 2012-2013; and 2 out of 8 in 2013-2014).

## 2. Assessment Documentation

## 2e. Assessment description.

The current CST consists of six subareas. Five subareas (i.e., mathematical reasoning \& communication, algebra, trigonometry \& calculus, measurement \& geometry, and data analysis) are assessed using multiple-choice questions and one subarea (i.e., algebra) is also assessed using a constructed-response item. There is a maximum possible score of 300 each subarea. The overall score is a weighted score for which passing is 220 out of 300 . There is no minimum score required to pass the subareas.

## 2f. Scoring guide.

The NYSED does not provide a scoring guide for the multiple-choice sections of the CST. NYSED does identify assessment criteria (NYSTCE, Test preparation guide, 2006, p. 46) for the constructed-response test.

## Assessment Criteria:

- Purpose: Fulfill the charge of the assignment
- Application of Content: Accurately and effectively apply the relevant knowledge and skills.
- Support: Support the response with appropriate examples and/or sound reasoning reflecting an understanding of the relevant knowledge and skills.

How the scores ( 0 to 300) are determined for the multiple choice test and the constructedresponse test is not specified.

## 2g. Candidate data derived from Assessment 1.

Multiple-Choice Test
Subarea1: Mathematical reasoning \& communication
Subarea 2: Algebra
Subarea 3: Trigonometry \& calculus
Subarea 4: Measurement \& geometry
Subarea 5: Data analysis, probability, statistics \& discrete math
Constructed-Response Test
Subarea 6: Algebra
Given that we only have one candidate who completed the Middle Childhood Education:
Mathematics, Grades 5 - 9 Program. It does not make sense to examine the data for trends.

[^0]:    ${ }^{1}$ In September 2014, candidates will be taking a CST based upon a new testing framework (http://www.nystce.nesinc.com/NY_PM.asp?t=004).
